

The FutureSoft E-Training Solution

Future Software Resources Nigeria Ltd. offers you a ready made online corporate training solution – a virtual learning environment (VLE), deployed on a dedicated server, hosted and maintained by FutureSoft, making material, training courses, online resources etc. accessible to your staff from any location or deployed as a LAN based solution all information is accessible within your LAN environment.

Corporate E-learning

Corporations are faced with major challenges in keeping their workforce current and competent. Many conventional training practices are unable to meet these challenges, as they are often unrelated to new business initiatives or key technology drivers. Often employees take courses and then forget their content. E-Training is the E-Learning concept transferred to the corporate world; enhancing motivation, performance, collaboration, innovation, and a commitment to life-long learning within an organization. E-Training brings learning to people instead of bringing people to learning.

E-Training Solution

Technology~Content~Services

Technology ~ we offer a customized Virtual Learning Environment (VLE), that fits the needs of your organization & enables you to deliver your training, as well as build a broad training repository, accessible to anyone within your organization.

Content ~ we provide your organization with content for E-Training & help you digitalize & update already existing training material.

Services ~ We provide training- & learning-related services, like training, hosting services, assessment & testing services, on-line recruitment & many more.

Taking Your Staff Training Online

How your organization will benefit from E-Training:

Convenience: E-Training makes learning in a working environment more convenient, as trainees and employees can learn any time, any place and most importantly at any pace.

Centralization of Training Material: With a centralized repository for training material, instructors can update lessons & materials across the entire network instantly, keeping content fresh & consistent & giving employees immediate access to the most current information.

Cost Saving: According to Training Magazine, corporations save between 50–70% when replacing instructor-led training with electronic content delivery, i.e. E-Training.

Higher retention of content: With 24x7 access, people can learn at their own pace and review course material as often as needed. E-Training allows staff to customize the learning material to their own needs, giving them more control over their learning process and helping them understand the material better. This leads to a 60% faster learning curve, compared to instructor-led training.

Interactivity between trainees: Teaching and communication techniques which create an interactive online environment include case studies, demos, simulations, streamed videos, online references, discussion groups, project teams, chat rooms, bulletin boards etc.

Less intimidating: E-Training shows the consequences of trainees' actions - where/why they went wrong & allows them to go back and try again.
